

It's not rebuilt.

IT'S YOUR MACHINE REBORN

Remanufactured is not the same as rebuilt or repaired. The distinction is critical.

Rebuilt

- Disassembled only to the point of failure
- Rebuilt using the same, new or aftermarket part
- Fix only what is broken

Remanufactured

- Parts and components are completely disassembled, thoroughly cleaned and inspected for wear or damage
- Any part not meeting original factory specifications is either recycled or remanufactured back to new specifications
- All wear-type parts such as pistons, liners, bushings, bearings and gaskets are replaced 100 percent of the time with new John Deere parts
- All components are tested to new, not rebuilt specifications
- Remanufactured components feature the latest design enhancements to ensure that performance is equal to or better than the original part

A WORRY-FREE WARRANTY

A John Deere Reman warranty:

Is even better if you rely on your dealer to install the part

Gives you added security and decreased risk

Is as good as or better than the warranty you'd find on an equivalent new part

Remanufactured PARTS AND COMPONENTS

John Deere Remanufactured Parts & Components

LIKE NEW PERFORMANCE AT A FRACTION OF THE COST

A wide variety of remanufactured parts are available for the full family of John Deere agricultural products.

- **Competitive pricing** when compared with outside supplier options
- **Known repair costs** upfront
- **Protection** with a one year unlimited hour parts and labour warranty on dealer installations
- **Feature the latest** design enhancements and are tested to meet or exceed new component OEM specifications
- **John Deere quality**
